Agenda

valantic

Development Accelerator as part of our vision 2030

Vision contribution

We free from repetitive tasks, such as creation of general dashboard framework, mobile enablement, responsive and adaptive design, standard codes, CSS classes etc.

Overcome challenges

We are overcoming pain points which we are facing regularly in our dashboard projects upfront.

Sharing WOW effects

We collect functions and user experience from many projects into one asset, which have caused absolute enthusiasm and excitement.

valantic

Your SAC Project Benefits

Efficiency

The asset **accelerates** your dashboard development projects and **reduces costs**

Consistency

The asset ensures a **consistent look & feel** as well as performance best practices across your SAC Landscape
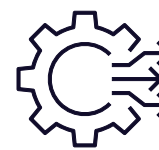

Custom functionalities

The asset includes a set of custom implemented functionalities
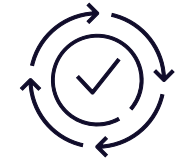

Re-usable assets

Chart & Shape Library; Re-usable design components

	Adaptive behavior based on screen size	Filtering use case (custom filter panel; combination of SAC functions and scripting)	IBCS conforming Chart Library covering all reporting use cases and scenarios
Design Conventions	Template Theme & CSS (centrally managed; adapted to individual Corporate Design)	Dynamic Popups	Nested design structure which can be copied for every page and widget
Naming Conventions (essential to code maintainability)	Dark mode	Bookmarking & PDF Export (improvement of standard functions)	Pre-loaded Icon Library

    2.3   Portfolio Presentation

valantic

Success stories from user practice

Ramp-up accelerator

Challenge
Fast dashboard delivery at a producer of camera and lightning systems.

Solution
By importing our framework, we accelerated the build phase of the dashboard and were thus able to directly add content and control-relevant value.

Design discussion guide

Challenge
Aimless design discussions in an engine manufacturing company consumed capacity, budget and time.

Solution
Our chart library makes the question of the right chart type obsolete. It categorizes chart types according to the KPI use case and its steering purpose. This inspires the business team and provides re-usable presentation samples.
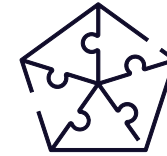

Organizational consistency

Challenge
Inconsistencies within a dashboarding-landscape of an engine manufacturing company led to misinterpretations of the same KPI's.

Solution
The installation of our asset ensures a general KPI governance throughout the organization. Even when using several vendors to create dashboards, the general look-and-feel and corporate elements could be maintained.
